SHARING EXPERIENCES AMONG DOMESTIC EXPERTS AS PART OF DISSEMINATION

PLM TRAINING

LILLAFÜRED

The 15. 10. 2019 PLM training in Lillafüred was held by Dr. Györgyi Lakatosné Szuhai, parent of the PLM Programme.

The training offered participants a tale, through which they can familiarise with the 10 knowledge areas and 5 process groups of project management, after which the PLM method's tools and methodology were introduced.

During the second half of the training, the participants could gain insight into the typical problems of various life situations, as a realistic goal and a detailed plan, separation of tasks with a proper timing schedule and cost analysis, and risks roster can help us realise our dreams.

The training showed examples of typical tasks during our lives as signposts to signify that project management tools can be used in private life. Naturally, the problems were different for underage, kindergarteners, pre-schoolers, middle schoolers, high schoolers, career starters, divorced, unemployed, executives, or those awaiting retirement. Various life situations necessitate different competences, but the toolset of the PLM method offers aid to successfully manage all said situations.

It helps middle school students who try to find themselves on the bumpy road of becoming adults, and helps those awaiting retirements who are afraid of the sense of becoming unnecessary. It helps by offering assistance to realistic goal creation and re-planning, and by using other elements of the PLM system, we merely have to always know which element of the system we should use.

Based on the feedback, participants left with positive experiences. And with a perspective and system that will hopefully lead them towards the realisation of their dreams.
